

Key Features KeyMaaS Can Provide For You

ACCESSIBILITY

The KeyMaaS key management software provides a web-based solution for overseeing your KeyWatcher hardware. Accessible through mobile devices, it empowers you to control access and receive alerts while on the go.

COST-EFFECTIVE

The KeyMaaS cloud solution is meticulously crafted to offer you a budget-friendly alternative, eliminating the need for infrastructure or support typically necessary for implementing a KeyWatcher system in your environment. The hosted solution only requires the customer to supply power to the KeyWatcher.

DASHBOARD

The workstation and mobile-responsive dashboard offer a rapid view of individual KeyWatcher statuses and a summary of recent activities, such as key removals, returns and alarms. Convenient shortcuts facilitate swift navigation to key sections within the program.

GENERAL WEB FORM

Allocation of key access from the KeyWatcher can be designated to end users via the secure online web portal or through either private or publicly accessible web forms.

ONLINE RESERVATIONS

Reservations for specific keys at designated times and dates can be made through a dedicated menu providing an ideal solution for overseeing access to vehicle fleets or ensuring the availability of specific key sets at predetermined times.

DUAL PLATFORM CAPABILITIES

There is no necessity to upgrade the KeyWatcher Illuminated hardware to access the advantages of the touch screen version. KeyMaaS efficiently handles both hardware versions while utilizing the same database.

REPORTING

Comprehensive audit trail data is accessible through standard reports in .CSV or PDF formats, with the additional option of scheduling and email distribution based on designated roles and responsibilities.

MONITORING & ESCALATION

The KeyMaaS platform oversees the operational condition of every KeyWatcher unit, presenting a user-friendly dashboard indicating the status of each system. It also issues notifications regarding system failures through email and/or SMS, which can be escalated according to designated roles and responsibilities.

-  Dashboard
-  Multi Platform
-  User Management
-  Contractor Onboarding
-  Automated Expiry
-  Scheduled Reporting
-  Removal Notifications
-  Return Notifications
-  Unlimited Web Clients
-  Access Control
-  User Approval
-  SMS Notifications
-  Escalated Notifications
-  Proactive Maintenance
-  Mobile Support
-  Two Factor Authentication
-  Reservations
-  Key Management
-  Profile Management

KEY MANAGEMENT AS A SERVICE

Options for Deploying KeyMaaS Software

Hosted Solutions: The Morse Watchman distributor may host the entire solution, providing secure access to an online web portal. The KeyWatcher incorporates a wireless 4G modem, communicating securely with an AWS server via VPN service. KeyWatcher retrofitted with M2M VPN connection to KeyMaaS cloud platform.

Hybrid Version: This version operates within the customers own environment, necessitating outbound access solely to the KeyMaaS proxy server. It affords all the advantages and functionalities of the hosted solution.

Need To Incorporating A 3rd Party?

Integration into your system can result in time and cost savings, as it removes the necessity of relying on a dedicated administrator to carry out routine database management tasks. Through the smooth integration facilitated by the KeyMaaS solution many customers see the benefits of an integrated product. KeyMaaS has a range of 3rd party integrations with many leading solution providers.
